

Pallet distribution doesn't

NEED TO COST THE EARTH

Pall-Ex is committed to providing customers with a trusted, efficient and cost-effective palletised freight distribution service.

Our impressive list of accreditations and awards for performance, training and innovation include:

► **ISO 14001:2015**

for environmental management

► **ISO 45001:2018**

for occupational health and safety management.

► **ISO 9001:2015**

for network-wide quality across all our member locations.

Pall-Ex is the only UK pallet network to receive the industry's gold standard

These standards provide a structured framework which allows us to extend operational efficiencies to all our stakeholders.

At Pall-Ex we are driving greener solutions into the business for the distribution of palletised goods across the UK and beyond.

The UK pallet network model initially devised to provide cost-effective final-mile logistics solutions, also reduces the environmental impact of goods distribution.

The Association of Pallet Networks (APN) states that any potential UK customer is, on average, six miles from a pallet network member giving a greater consolidation to freight movement around the country.

Furthermore, the APN gives weight to the benefit of a palletised goods network by sharing data that vehicles are averaging a 72% fill rate against a far lower 51% fill rate in other road freight sectors.

By delivering a near 50% increase in trunk capacity, an estimated 800 fewer vehicles are needed to deliver from A to B through a pallet network - reducing congestion, noise pollution, carbon footprints and other noxious gas emissions.

Not only will working with Pall-Ex ease your environmental conscience but will also yield an improved financial result for your business.

The use of a quality pallet network solution to distribute palletised goods enables a reduction in fuel costs and wear and tear to your fleet due to the reduced mileage necessary to distribute goods.

You can also increase your coverage, whether within the UK or further afield, and your choice of timed services to clients by utilising the efficient logistics process a pallet network offers.
